Opencart 1.5-2.2 module installation manual

You will need API keys for your module to connect to Decta. API keys are available in Decta's administration panel - you will need to register a free account to get keys you can test your integration with. After that you can proceed with the rest of this manual.

To start accepting real-money payments, you will need to apply for a verified account. Once your account is verified, you can simply replace testing keys with live keys and you're all set for accepting live purchases.

1. Open the "Extension installer" section under "Extensions" tab of Opencart 1.5-2.2. administration panel (see Image 1).

4. Find and install Decta module.
5. Click the "Edit" button.
6. The module provides several parameters (see Image 4) that should be filled out for it to work correctly:
    a. **Status** - Indicates whether the module is active on your webpage. Choose " **Enabled** ".
    b. **Public key** - available in Decta company administration panel , **"API"** section.
    c. **Secret key** - available in Decta company administration panel , **"API"** section.
    d. **Pending Status** - Order status before your client has made the payment (usually " **Processing** " or" **Pending** ").
    e. **Completed Status** - Order status after your client has made the payment (usually " **Complete** "). Status is set only after Decta responds to Opencart that payment has been received.
    f. **Failed Status** - Order status when your client unsuccessfully tried to make the payment (usually " **Failed** "). Status is set only after Decta responds to Opencart that payment has not been successful.
    g. **Sort Order** - Order in which Decta module appears in your list. If you want Decta module to be the first in your list, put "1" next to it and higher numbers next to other payment methods.
